F-LOD-M
LOW OPTICAL DENSITY METALLIZED FILM

F-LOD-M is a metallized BOPET film having a Low Optical Density. The base film is Untreated or Corona Treated on one side. The other side has a consistent metal coating on the Plasma Treated surface. The bond strength between the metal and the film is a minimum of 150gm/25mm when metallized on the Plasma Treated surface.

KEY FEATURES:
• Excellent electrostatic dissipation
• Low optical density allows easy scanning & identification
• Excellent handling and conversion properties
• Static shielding capability

APPLICATION:
• Bags for electronic devices & components
• Bags for printed circuit boards (PCB’s)
• Machinery covers
